

Luchinin V. V. *Micro- and Nanotechnics. Technologies of Excellence* 2

Analysis of technologies of excellence as an intellectual basis for the new technological setup is discussed. The main evolutionary trends of materials science basis as a platform of the technologies of excellence development are described within the aspect of "Micro- and nanotechnics".

Keywords: micro- and nanotechnics, technologies of excellence, technological setup, convergent systems, bi-ionic technologies

Goloudina S. I., Luchinin V. V., Pasyuta V. M., Krishtab M. B., Panov M. F., Rozanov V. V., Sklizkova V. P., Kudryavtsev V. V., Baklanov M. R. *Structural Features and Prospective Applications of Langmuir—Blodgett Films of a Rigid-Chain Polyimide* 9

Langmuir—Blodgett multilayer films of rigid-rod polyimide based on polyamic acid (PAA BPDA-oTD) alky-lamonium salt has been studied by reflection ellipsometry, atomic force microscopy, small-angle X-ray scattering and X-ray reflectivity. It was shown that nanosized polyimide films can be effectively used for precise reducing the internal stress of the bilayer membrane "silicon nitride-polyimide". Modification of SiO₂ electret by the polyimide films (2—5 nm) leads to high charges stability. High pore sealing capability of polyimide films has been also demonstrated.

Keywords: polyimide, Langmuir—Blodgett, membrane, pore sealing

Zimina T. M., Muratova E. N., Spivack Ju. M., Drozd V. E., Romanov A. A. *Formation Technologies and Applications of Nanolayers and Nanoporous Compositions of Al₂O₃ for Micro- and Nanoequipment* 15

The key technological approaches of formation of aluminum oxide nanolayers and compositions with different characteristics have been considered. They include atomic layer deposition, anodization and electrochemical etching. Presented a brief review on essential application fields of aluminum oxide in a form of nanolayer compositions, metal modified nanopore compositions and macropore systems.

Keywords: nanolayers of aluminum oxide, porous anodic aluminum oxide, atomic-molecular chemical assembly, electrochemical anodization, biosensor, lab on a chip

Efremenko A. M., Korlyakov A. V., Astashenkova O. N., Krivosheeva A. N. *Low-Temperature Synthesis of Aluminium Nitride Textured Films on Heterogeneous Waters for MEMS Devices*. 25

The results of the study of processes of aluminum nitride films obtaining by if magnetron sputtering are submitted in this article. It is shown the influence of the main process parameters on the properties of the resulting films, including the influence of the electric field produced by an uncompensated charge on the surface of the growing film AlN. A mechanism of residual stress emergence in AlN films by ion-plasma deposition is proposed.

Keywords: thin film, aluminum nitride, texture, magnetron sputtering, mechanical stress, piezoelectric films

Zimina T. M., Soloviev A. V., Luchinin V. V., Nicolaev B. P. *Express Methods for Investigation of Size, Mobility and Aggregation Stability of Magnetic Nanoparticles in Capillary Microchip* 30

The results on magnetite (Fe₃O₄) magnetic nanoparticles (MNP) study by using optical express-methods of characterization in a capillary chip with composite lane magnetic guide. Size and magnetophoretic mobility of MNP were measured using quasielastic light scattering in homo-dyne and heterodyne modes, correspondingly, and aggregation stability — by using the method of dynamic microturbidimetry. Comparative study of characteristics of magnetite MNPs, synthesized by direct and microemulsion methods demonstrated that the latter method gives aggregation-stable nanoparticles of 10 nm size and with magnetophoretic mobility value of about $4 \cdot 10^{-13} \text{ m}^3 \times (\text{T} \times \text{A} \times \text{s})^{-1}$. It has been shown that developed express-methods enable a rapid (about 0,5—3 min) measurements of MNP properties to be carried out by using micro volumes of samples (1—2 μl) without dilution (in suspensions of up to 10 % volume concentration).

Keywords: magnetic nanoparticles, capillary chip, quasielastic light scattering in capillary, microturbidimetry, magnetophoresis in capillary

Kuznetsova M. A., Luchinin V. V. *Focused Ion Beam Machining of SiC Field Emitters* 35

The results of analysis of possibilities and limitation on focused ion beam application for microsystem objects and various investigation methods are represented in the paper. The peculiarities of focused ion beam technique' and its application for formation of SiC field emitters were analyzed.

Keywords: silicon carbide, focused ion beam, field emission, diode, ion beam etching, ion beam deposition

Korlyakov A. V. *Analogue Method for Complex Analysis and Micro Systems Elements Modelling* 41

We consider a method of describing microsystems in a generic parameter. The tables analogies potential and kinetic parameters of the systems of different physical nature. The features of circuit description of microsystems in lumped parameters by analogy ideal elements for a variety of physical systems. Gives examples of arrangements of analog converters for different elements of microsystems.

Keywords: analogue method, microsystem, converter, equivalent circuit, gyrators, membrane element

Vetrov A. A., Korlyakov A. V., Sergushichev A. N., Sergushichev K. A. *Calculation and Measurements of Dynamic Parameters Nanoscale Vibrations of Micromembrane Elements* 48

Amathematical model and computation results of micromembrane elements, manufactured by MEMS technology. Arepresented an experimental setup, based on a fiber-optic interferometer Fabry—Perot for precision non-contact sensitivity measurements of micromembrane elements is developed. The methodology for measurements of AFC of sensitivity is proposed and experimental results are presented.

Keywords: micromembraneelement, mathematical model, sensitivity, resonance frequency, optoelectronic measurement system, fiber-optic interferometer

Bokhov O. S., Spivak A. M., Orekhov Yu. A. *Miniature Navigation and Orientation Integrated Modules Based on Microelectromechanical Systems* 55

There is described application of microelectromechanical systems for miniature inertial navigation and orientation modules to achieve improvement in mass and dimension characteristics as well as decreasing of power consumption. In same time the integration approach gives possibility to design devices with technical characteristics that is comparable with systems based on laser gyroscopes. Also those devices can provide some additional characteristics like that: time of cold start; acceleration robustness e.t.c.

Keywords: navigation, MEMS, accelerometer, gyroscope

Bochov O. S., Dukhnovsky M. P., Kozyrev A. B., Korlyakov A. V., Korolev A. N., Lagosh A. V., Luchinin V. V., Toptalov S. I. *Low-Power Consumption Small-Sized Radiofrequency Modules Based on RF MEMS Switch* 60

In this paper, the peculiarities of the MEMS switch constructions with the different principles of the operation have been considered. The MEMS switches have been designed. Also, the peculiarities of the microwave MEMS switches with the use of diamond-like materials have been considered. Furthermore, the switch models have been developed and the comprehensive analysis of their characteristics has been carried out. As a result, the phase shift modules based on the MEMS switches for phased arrays have been manufactured. In addition, the phased arrays for different frequency ranges have been worked out.

Keywords: MEMS switch, phase shifters, phased arrays, diamond-like materials

Afanasyev P. V., Borodnikov N. I., Bokhov O. S., Luchinin V. V., Ustinov E. M., Udin R. V. *Express Prototyping of Microdevices with RF Channel* 71

The goal of this paper to show the possibility of rapid prototyping of complex integrated microsystem device with sensor and actuator, microcontroller, energy sell, RF channel. The main principle of estimation of present work efficacy on one hand is the mass of device and the time for prototyping and on another hand is the complexity of device functions.

Keywords: integration, microassembling, ASIC, flexible electronic
